Work Experience

Reptland [↗](#)

Description: A social media/forum site and tool kit for reptile enthusiasts

Environment: MongoDB, Express, React, Node, AWS, JavaScript, HTML, CSS

- Integrated AWS S3 to reduce maintenance overhead, increase performance and increase scalability
- Used Node back end to increase server and client-side performance and stability
- Used MongoDB to improve developer velocity and time to MVP
- Used CSS to design a responsive and scalable layout

GitHub [↗](#)

Private Events [↗](#)

Description: An event tracking and creation application

Environment: Ruby, Ruby on Rails, PostgreSQL, EJS, JavaScript, HTML, CSS

- Performed user authentication and sanitation with active record and devise
- Used CRUD and MVC models to control server side rendering and database access
- Built SQL schemas to fit the needs of a relationship-driven event system

GitHub [↗](#)

Crypto API [↗](#)

Description: An event tracking and creation application

Environment: ReactJS, Axios, CoinGeko API, JavaScript, HTML, CSS

- Integrated 3rd party API to display content to client
- Implemented Axios HTTP client to access information from outside sources
